**ADDENDUM 22-030 TO FINAL SUPPLEMENTAL ENVIRONMENTAL IMPACT
STATEMENTS
DATED: AUGUST 1992 AND JANUARY 2002**

Name of FSEIS:

1. Lake and Stream Rehabilitations Final Supplemental Impact Statement (FSEIS), 1992-1993 and
2. Lake and Stream Rehabilitation: Rotenone Use and Health Risks FSEIS, 2002

Description of Proposal:

The original FSEISs were reviewed as a statewide proposal and they apply to statewide coverage. Implementation of the FSEISs includes the following waters for the **2022** season.

This proposal includes the rehabilitation of two (2) lakes (Williams Lake and Fish Lake; Spokane County) as well as four (4) seasonally watered ponds (West Medical Ponds; Spokane County) in Eastern Washington managed exclusively as trout emphasis. The rehabilitation treatment will employ the use of rotenone to improve fishing for trout via the elimination of undesirable and/or illegally stocked fish which compete with or prey upon stocked trout fry/fingerlings. It will also restore the economic strategy of stocking fingerling trout instead of the much more expensive and larger “catchables” which are used to temporarily “prop up” under-performing trout fisheries when stocking fry/fingerlings becomes ineffective. Post-treatment, Williams Lake and Fish Lake will be stocked with catchable Rainbow Trout *Oncorhynchus mykiss* in March-April of 2023 to support fisheries in the spring of 2023. They will also be stocked with Rainbow Trout fry/fingerlings in spring 2023 to create a more economically and biologically sustainable trout-only fishery. Subsequent stockings will consist of fry or fingerling-size trout.

The competing/predatory species targeted for removal in these lakes are Pumpkinseed Sunfish *Lepomis gibbosus*, Tench *Tinca tinca*, and Yellow Perch *Perca flavescens* (Williams Lake and Fish Lake) as well as Goldfish *Carassius auratus* (West Medical Ponds).

Our 2022 program proposal also includes the treatment of Upper Flume Creek in Pend Oreille County with rotenone to remove non-native Eastern Brook Trout *Salvelinus fontinalis*.

Historic, unoccupied beaver ponds are present within Tributary 9 (Flume Creek drainage). These ponds will be dewatered via pumping immediately prior to treatment. Consultation with the Washington Department of Ecology in 2018 and 2020 confirmed that the temporary dewatering does not require a short-term water right permit. Because Tributary 9 empties into mainstem Flume Creek, there is no net gain or loss of water, and there is no beneficial use of the water from dewatering of the ponds (H. Spangle, pers. comm.).

A temporary fish management structure (tFMS) was constructed on mainstem Flume Creek in October 2019, approximately 0.25 miles downstream of the confluence with Middle Fork Flume Creek to facilitate effective treatment of the watershed (portion upstream of the tFMS is referred to as Upper Flume Creek; 5.13 miles). The tFMS will remain in place to prevent reinvasion by downstream populations of Brook Trout until treatments can be proposed and completed in Lower Flume Creek (approximately 6.5 miles) in coming years. Following complete Brook Trout removal, genetically pure Westslope Cutthroat Trout *Oncorhynchus clarki lewisi* will be translocated from Slate Creek into the Upper Flume Creek watershed above the tFMS.

Environmental DNA (eDNA) and backpack electrofishing sampling will be conducted in summer 2022 to assess whether Brook Trout were removed from the project area by previous treatments conducted from 2019-2021. If Brook Trout are not detected, an additional rotenone treatment will not be necessary, and Westslope Cutthroat Trout will be stocked. If Brook Trout are detected and removal of remaining fish cannot be accomplished via mechanical means, a rotenone treatment would occur in 2022, and restocking of Westslope Cutthroat Trout would be delayed until Brook Trout are removed from the project area.

Proponent/Applicant: Washington State Department of Fish and Wildlife (WDFW)

Location of Current Proposals: Implementation of the FSEIS includes the following waters for the 2022 season:

Spokane County

Williams Lake – Sections 12 and 13, Township 21 North, Range 40 East, WM, and sections 5,6,7 and 8, Township 21 North, Range 41 East, WM.

Fish Lake – Sections 4 and 5, Township 23 North, Range 42 East, WM and sections 32 and 33, Township 24 North, Range 42 East WM.

West Medical Ponds – Section 12 and 24, Township 24 North, Range 40E, WM. Pond 1 (47.58329N, -117.71100W), pond 2 (47.56172N, -117.70128W), pond 3 (47.56159N, -117.70031W), and pond 4 (47.56198N, -117.70003W).

Pend Oreille County

Upper Flume Creek – Sections 4, 5, and 9, Township 39 North, Range 43 East and Sections 32 and 33, Township 40 North, Range 43 East, WM.

Lead Agency: Washington Department of Fish and Wildlife (WDFW)

The updated information provided above does not substantially change the analysis of significant impacts in the existing FSEISs (dated August 1992 and January 2002). Based on the FSEISs and the updated information provided in this addendum, the lead agency has determined that a new threshold determination is not warranted.

The FSEISs and supporting documents for this Addendum are available to be read at:
Washington Department of Fish and Wildlife - Natural Resources Building,
1111 Washington Street SE, Olympia, WA, Monday - Friday 8:00 am - 5:00 pm.

The documents are also available for review online on the WDFW SEPA webpage:
<https://wdfw.wa.gov/licenses/environmental/sepa/open-comments>.

We issued this Addendum under WACs 197-11-600 and 197-11-625. Agencies, tribes, and members of the public are invited to comment on this proposal or Addendum. We must receive your comments within 24 days of the date of this letter. The comment period will end at **5:00 pm on June 10, 2022**.

Method of Comment: The following procedures shall govern the method to comment on agency SEPA proposals. Comments received through these procedures are part of the official SEPA record for this proposal. You can submit your comments through one of the following ways:

- Online at the Public Input comment portal for this proposal:
<https://publicinput.com/LakeStreamRehab2022>
- Email to: LakeStreamRehab2022@PublicInput.com

Responsible Official: Lisa Wood

Position/Title: SEPA/NEPA Coordinator, WDFW Habitat Program, Protection Division

Address: P.O. Box 43200, Olympia, WA 98504-3200

After the comment period closes, applicants may view the updated status of this proposal on the WDFW SEPA website: <https://wdfw.wa.gov/licenses/environmental/sepa/closed-final>. After the status is posted as final, applicants and permittees may take action on the proposal.

If you have questions about this Addendum or the details of the proposal, contact Lisa Wood at SEPADesk2@dfw.wa.gov.
