## LIST OF TABLES

Table 1.1 Sampling/estimation details on target parameters associated with the overall Area 5 summer mark-selective fishery monitoring program.

Table 1.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 5 Chinook MSF from July 1 - August 15, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.3 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the Area 5 Chinook MSF from July 1 - August 15, 2013.

Table 1.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the Area 5 Chinook MSF from July 1 - August 15, 2013. The field "Number DITs" corresponds to the number of tags that belonged to double-index tag groups.

Table 1.5 Total Chinook encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the Area 5 Chinook MSF from July 1 - August 15, 2013, with estimates of legal-size and overall (legal and sublegal) mark rates. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.

Table 1.6 Summary of season-wide fishery impact estimates for the Area 5 Chinook MSF from July 1 - August 15, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.7 Comparison of modeled (FRAM model run 1213) and estimated total Chinook encounters for the Area 5 Chinook MSF from July 1 - August 15, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.8 Comparison of modeled (FRAM model run 1213) and estimated total Chinook mortalities for the Area 5 Chinook MSF from July 1 - August 15, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.9 Summary of double-index tagged (DIT) Chinook kept by anglers, and estimated total mortality of unmarked DIT Chinook due to hook-and-release impacts resulting from the Area 5 Chinook MSF from July 1 - August, 2013. AD = marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.10 Monthly sample rates (Total retained Chinook sampled ${ }^{1}$ / Estimated retained Chinook) in the Area 5 Chinook MSF from July 1 - August 15, 2013. AD $=$ marked (adipose-clipped), UM = unmarked.

Table 1.11 Fishery-total estimates of retained and released salmon (other than Chinook) for the Area 5 Chinook MSF from July 1 - August 15, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 1.12 Season-total estimates of Chinook encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 5 summer Chinook MSF. Values may not add exactly due to rounding error.

Table 2.1 Sampling/estimation details on target parameters associated with the overall Area
6 summer mark-selective fishery monitoring program. .................................................... 16
Table 2.2 Observations of fishing effort, salmon harvest, and reported salmon releases, by week, for the Area 6 Chinook MSF from July 1 - August 15, 2013. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked, $\mathrm{UK}=$ unknown mark status.

Table 2.3 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the Area 6 Chinook MSF from July 1 - August 15, 2013.

Table 2.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the Area 6 Chinook MSF from July 1 - August 15, 2013. The field "Number DITs" corresponds to the number of tags that belonged to double-index tag groups.

Table 2.5 Total Chinook encountered (retained and released) by private-boat anglers logging their trips on voluntary trip reports (VTRs) during the Area 6 Chinook MSF from July 1 - August 15, 2013, with estimates of legal-size and overall (legal and sublegal) mark rates. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.20

Table 2.6 List of sites sampled with the number of sampling events (site-days) during the
Area 6 Chinook MSF from July 1 - August 15, 2013. ........................................................... 20
Table 3.1 Sampling/estimation details on target parameters associated with the overall Area 9 summer mark-selective fishery monitoring program.22

Table 3.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 9 Chinook MSF from July 16 - August 4, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.23

Table 3.3 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the Area 9 Chinook MSF from July 16 - August 4, 2013

Table 3.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the Area 9 Chinook MSF from July 16 - August 4, 2013. The field "Number DITs" corresponds to the number of recovered CWTs that belonged to double-index tag groups... 25

Table 3.5 Composition of test fishery Chinook encounters and associated mark-rate and size/mark-status proportion estimates for the Area 9 Chinook MSF from July 16 - August 4, 2013. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses

Table 3.6 Total Chinook encountered (retained and released) by private-boat and charter boat anglers logging their trips on voluntary trip reports (VTRs), with estimates of legalsize and overall (legal and sublegal) mark rates during the Area 9 Chinook MSF from July 16 - August 4,2013 . $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.26

Table 3.7 Summary of season-wide fishery impact estimates for the Area 9 Chinook MSF from July 16 - August 4, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 3.8 Comparison of modeled (FRAM model run 1213) and estimated total Chinook encounters for the Area 9 Chinook MSF from July 16 - August 4, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped) and $\mathrm{UM}=$ unmarked.

Table 3.9 Comparison of modeled (FRAM model run 1213) and estimated total Chinook mortalities for the Area 9 Chinook MSF from July 16 - August 4, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped) and $\mathrm{UM}=$ unmarked.

Table 3.10 Summary of double-index tagged (DIT) Chinook kept by anglers, and estimated total mortality of unmarked DIT Chinook due to hook-and-release impacts resulting from the Area 9 Chinook MSF from July 16 - August 4, 2013. AD = marked (adiposeclipped), UM = unmarked.

Table 3.11 Monthly sample rates (Total retained Chinook sampled ${ }^{1}$ / Estimated retained Chinook) in the Area 9 Chinook MSF from July 16 - August 4, 2013.29

Table 3.12 Fishery-total estimates of retained and released salmon (other than Chinook) in the Area 9 Chinook MSF from July 16 - August 4, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked, $\mathrm{UK}=$ unknown mark-status.

Table 3.13 Summary of the total number of anglers intercepted in Area 9 during on-thewater surveys conducted from July 16 - August 4, 2013. Sites in bold represent those included in the dockside sample frame.

Table 3.14 Season-total estimates of Chinook encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 9 summer Chinook MSF. Values may not add exactly due to rounding error.

## Table 4.1 Sampling/estimation details on target parameters associated with the overall Area 10 summer mark-selective fishery monitoring program.

Table 4.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 10 Chinook MSF from July 16 - August 18, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 4.3 Summary of total length samples from retained Chinook salmon collected during dockside angler interviews in the Area 10 Chinook MSF from July 16 - August 18, 2013. . 36

Table 4.4 Summary of coded-wire tags recovered from Chinook salmon harvested during the Area 10 Chinook MSF from July 16 - August 18, 2013. The field "Number DITs" corresponds to the number of recovered CWTs that belonged to double-index tag

Table 4.5 Composition of test fishery Chinook encounters and associated mark-rate and size/mark-status proportion estimates for the Area 10 Chinook MSF from July 16 August 18, 2013. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.37

Table 4.6 Total Chinook encountered (retained and released) by private-boat and charter boat anglers logging their trips on voluntary trip reports (VTRs) compared to test fishing encounter data, with estimates of legal-size and overall (legal and sublegal) mark rates during the Area 10 Chinook MSF from July 16 - August 18, 2013. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.

Table 4.7 Summary of season-wide fishery impact estimates for the Area 10 Chinook MSF from July 16 - August 18, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

Table 4.8 Comparison of modeled (FRAM model run 1213) and estimated total Chinook encounters for the Area 10 Chinook MSF from July 16 - August 18, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped) and $\mathrm{UM}=$ unmarked.

Table 4.9 Comparison of modeled (FRAM model run 1213) and estimated total Chinook mortalities for the Area 10 Chinook MSF from July 16 - August 18, 2013. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped) and $\mathrm{UM}=$ unmarked.

Table 4.10 Summary of double-index tagged (DIT) Chinook kept by anglers, and estimated total mortality of unmarked DIT Chinook due to hook-and-release impacts resulting from the Area 10 Chinook MSF from July 16 - August 18, 2013. AD = marked (adiposeclipped), $\mathrm{UM}=$ unmarked.

Table 4.11 Monthly sample rates (Total retained Chinook sampled ${ }^{1} /$ Estimated retained $^{2}$ Chinook) in the Area 10 Chinook MSF from July 16 - August 18, 2013.

Table 4.12 Fishery-total estimates of retained and released salmon (other than Chinook) in the Area 10 Chinook MSF from July 16 - August 18, 2013. Values may not add exactly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked, $\mathrm{UK}=$ unknown mark-status.

Table 4.13 Summary of the total number of anglers intercepted in Area 10 during on-thewater surveys conducted from July 16 - August 18, 2013. Sites in bold represent those included in the dockside sample frame.43

## INTRODUCTION

In recent years, abundant runs of hatchery Chinook salmon (Oncorhynchus tshawytscha) have been mixed with depressed runs of wild Chinook salmon in the marine environments of the Strait of Juan de Fuca and Puget Sound. Providing recreational anglers with opportunities to harvest abundant hatchery stocks while simultaneously protecting weaker, wild stocks has proven to be a significant conservation and management challenge. The combination of large-scale hatchery marking (i.e., fin clipping) programs and mark-selective harvest regulations makes it possible for anglers to pursue and harvest hatchery Chinook salmon while minimally impacting wild salmon populations. In such "mark-selective fisheries" (MSFs), anglers are generally allowed to retain adipose-fin clipped ("marked") hatchery fish and are required to release unharmed any unclipped ("unmarked", predominantly wild) salmon encountered ${ }^{1}$.

Since the Washington Department of Fish and Wildlife (WDFW) implemented the first marine mark-selective Chinook fishery in Marine Catch Areas 5 and 6 (Strait of Juan de Fuca) in 2003 based on state-tribal agreements (Thiesfeld and Hagen-Breaux 2005a ,WDFW 2008a), markselective Chinook salmon fishing regulations have been implemented on a pilot basis in multiple Puget Sound Marine Catch Areas during both the summer and winter seasons. As of the close of the summer 2013 fishing season, pilot summer Chinook MSFs have occurred in Areas 5 and 6 for eleven consecutive seasons, in Areas 9, 10, 11, and 13 for seven consecutive seasons and in Area 12 for two consecutive seasons. Additionally, pilot winter Chinook MSFs have occurred in Areas 8-1 and 8-2 for eight consecutive seasons, in Areas 7, 9 and 10 for six consecutive seasons, in Areas 11 and 12 for four consecutive seasons and in Area 6 for one season ${ }^{2}$.

During the 2013 summer season (May through September), WDFW implemented seven pilot mark-selective Chinook fisheries in Areas 5, 6, 9, 10, 11, 12 and 13. The Chinook MSF seasons in each area were scheduled as follows:

- Areas 5 and 6 from July 1 through August 15, 2013;
- Areas 9 and 10 from July 16 through August 31, 2013;
- Area 11 from June 1 through September 30, 2013;
- Area 12 from July 1 through September 30, 2013; and
- Area 13 from May 1 through September 30, 2013.

Consistent with the 2004 (and 2010 update) Puget Sound Chinook Harvest Management Plan (Puget Sound Indian Tribes and WDFW 2004 and 2010), a key goal of implementing each of these Chinook MSFs has been to provide meaningful opportunity to the recreational angling public while minimally impacting ESA-listed Puget Sound Chinook salmon.

[^0]
## Comprehensive Sampling and Monitoring Program

WDFW's Puget Sound Sampling Unit (PSSU) was tasked with implementing a comprehensive sampling and monitoring program in Areas 5, 6, 9, 10, 11, 12 and 13 to collect the data needed to evaluate each pilot Chinook MSF and its impact on unmarked salmon. Through state-tribal agreement (WDFW and NWIFC 2013a), we developed area-specific sampling plans consisting of several comprehensive and complementary sampling components, including dockside creel sampling, test fishing, on-water or aerial effort surveys, and angler-completed voluntary trip reports (VTRs). We tailored area-specific sampling plans so that we could reliably estimate the following critical parameters needed for evaluating MSFs:
i) the mark rate of the targeted Chinook population
ii) the total number of Chinook salmon harvested (by size [legal or sublegal] and markstatus [marked or unmarked] group)
iii) the total number of Chinook salmon released (by size and mark-status group)
iv) the coded-wire tag- (CWT) and/or DNA-based stock composition of marked and unmarked Chinook mortalities ${ }^{3}$
$v)$ the total mortality of marked and unmarked double index tag (DIT) CWT stocks
In addition, we acquired and analyzed relevant data characterizing other aspects of the pilot fisheries, including descriptors of fishing effort, fishing success (catch [landed Chinook] per unit effort), the length composition of encountered Chinook, and the overall intensity of our sampling efforts.

## Reporting Efficiencies

In July 2010, technical staffs from the WDFW Puget Sound Sampling Unit, Northwest Indian Fisheries Commission (NWIFC), and Puget Sound Treaty Tribes met to discuss potential reporting efficiencies in WDFW's Chinook MSF post-season reports. NWIFC and tribal representatives had initiated the idea for such a meeting, considering that WDFW had been submitting a separate post-season report for each area and season (since 2003) to the comanagers, resulting in redundancies between individual reports, particularly in the Methods section. Also, over the years we kept adding sections to the selective fishery annual reports, in response to individual tribal co-manager requests, and sustained those additions in each future report, resulting in ever-lengthening post-season reports. From both the WDFW and tribal technical perspectives, we needed to prioritize the most essential reporting elements and achieve efficiencies to streamline the selective fishery reporting work load.

WDFW and tribal staffs worked to prioritize the most essential elements (tables, figures and appendices) needed in WDFW's annual post-season MSF reports in an effort to define reporting efficiencies. Based on these decisions (details available in a WDFW memo dated August 16, 2010 summarizing the July 2010 meeting), we began implementing reporting efficiencies starting with the winter 2009-10 Chinook MSF post-season report and continuing thereafter.

[^1]At the July 2010 meeting we also agreed that a key efficiency in the annual reporting process would be for WDFW staff to produce a centralized Methods Report. The Methods Report would be a stand-alone document that includes the details of each area's Chinook MSF study design (for both winter and summer fisheries), sampling procedures, data analysis methods, and all equations used to generate estimates and variances. Thus, we refer the reader to our Methods Report (WDFW 2012a) for detailed descriptions of the diverse study designs and protocols used to monitor and evaluate the Chinook MSFs in Areas 5, 6, 9, 10, 11, 12 and 13 during summer 2013.

In the following pages, we report the results generated through our monitoring activities during the summer 2013 Chinook MSFs. We report results based on our more efficient reporting format agreed-to between state and tribal technical representatives, in which we focus on presenting data tables and figures rather than interpretive text (unless needed to specify noteworthy in-season adjustments or other circumstances unique to the particular season). We present summer 2013 Chinook MSF results in separate chapters (1 through 7) by area, and within each chapter the data are presented in a series of tables and figures generally according to the following sequence: $i$ ) estimates of fishery characteristics obtained from the dockside creel survey data, including catch and effort total estimates, Chinook length-frequency data, and CWT recovery results; ii) results from our recreational test fishery (where applicable); iii) results from our VTR collection efforts; iv) total fishery Chinook encounters and impacts-estimated based on creel survey and test fishery or VTR data-which we compare with pre-season expectations (based on Fishery Regulation Assessment Model [FRAM] predictions); v) sample rate information based on dockside sampling of harvested Chinook; vi) total mortality estimates of marked and unmarked DIT CWT stocks by hatchery and brood year; and vii) historical Chinook encounters estimates for each area's summer mark-selective Chinook fishery.

## RESULTS

## 1) Marine Area 5 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented an eleventh consecutive summer Chinook MSF in Marine Area 5 from July 1 through August 15, 2013. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 5 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included dockside creel sampling and intensive efforts to distribute and collect voluntary trip reports (VTRs) from the angling public. During the summer 2013 mark-selective Chinook fishery in Area 5 we maintained our enhanced VTR program in an effort to improve the return rate of voluntary trip reports, which provide estimates of Chinook encounter rates by size class (legal or sublegal) and mark status (ad-marked or unmarked). An additional WDFW technician was hired to work exclusively on distributing and collecting VTRs from the angling public in Area 5. This technician, along with the dockside samplers, also educated anglers about the VTR program and salmon species identification in a focused effort to increase the sample size of VTR-based encounter data. Table 1.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 5 summer Chinook MSF.

Table 1.1 Sampling/estimation details on target parameters associated with the overall Area 5 summer markselective fishery monitoring program.

| Activity | Focal <br> Parameter(s) | Secondary Parameter(s) | Sample <br> Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Creel Sampling | Fishing effort (boat \& angler trips); kept and released fish ${ }^{1}$ | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | Two weeks | Creel estimates were produced for twoweek estimation periods and stratified into "weekday" (Mon.-Thurs.) and "weekend" (Fri.-Sun.) day-type strata within weeks. For the weekday stratum we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum we sampled $n=2$ days out of $N=3$ available weekend days per week. |
| On-the-water Surveys | Proportion of total angler effort that uses sample-frame sites (i.e., site "size measures") versus out-of-frame sites. | Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area. | Boats and anglers | Month | Only 1 boat survey was conducted during the 2013 Area 5 summer Chinook MSF, as in-season observations suggested that sites and effort patterns did not change substantially in 2013 compared to past years. We incorporated data from this survey into recent three-year average site weights to compute catch and effort estimates. |
| Voluntary <br> Trip Reports (VTRs) | Size <br> (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | We used VTR data to estimate the size/mark-status proportions ( $\mathrm{LM}=$ $25 \%, \mathrm{LU}=22 \%, \mathrm{SM}=27 \%, \mathrm{SU}=$ $26 \%$; Table 1.5) needed to produce encounter and mortality estimates. |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Estimated on a monthly time step but considered at the season-total level. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

| Private VTR | 234 1-trip VTRs, 576 Angler Trips | 266 | 225 | 282 | 272 | 1045 | 0.52 | 0.54 |
| Test fishery size/mark-status composition: Variance: |  | $\begin{gathered} 0.25 \\ (0.00018) \end{gathered}$ | $\begin{gathered} 0.22 \\ (0.00016) \end{gathered}$ | $\begin{gathered} 0.27 \\ (0.00019) \end{gathered}$ | $\begin{gathered} 0.26 \\ (0.00018) \end{gathered}$ |  |  |  |

As no test fishery was conducted in the Area 5 summer mark-selective fishery, we focused our efforts on increasing the return rate of VTRs and thus, the sample size of fish encountered by recreational fishers. This year we received 233 VTRs, accounting for 572 angler trips during the 1.5 month fishery. We used these data to estimate the size/mark-status proportions needed to produce Chinook encounter and mortality estimates for the Area 5 summer Chinook MSF.

Table 1.6 Summary of season-wide fishery impact estimates for the Area 5 Chinook MSF from July 1 - August 15, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

In-season observations suggested that sites and effort patterns did not change substantially in 2013 compared to past years. Therefore, we conducted only one boat survey during the 2013 Area 5 summer mark-selective Chinook fishery. Data from this survey were included with the average of the previous three years' site weights (same values that were used for the 2011 and 2012 Area 5 summer Chinook MSFs) to determine site selections and to compute catch and effort estimates. Sites in the summer 2013 sample frame remained the same and included: Olson's East Docks, Olson's West Docks, Olson's Ramp \& Docks, Van Riper's North, Van Riper's South and Curley's Resort.

Table 1.12 Season-total estimates of Chinook encounters by size/mark-status and total estimates of angler effort, summarized for all seasons to date of the Area 5 summer Chinook MSF. Values may not add exactly due to rounding error.

## 2) Marine Area 6 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented an eleventh consecutive summer Chinook MSF in Marine Area 6 from July 1 through August 152013. WDFW's Puget Sound Sampling Unit (PSSU) implemented a comprehensive sampling program consisting of dockside angler interviews with catch sampling ("Baseline Sampling" approach; see WDFW 2012a for details) along with intensive efforts to distribute and collect voluntary trip reports (VTRs) from the angling public. We maintained our enhanced VTR program in an effort to improve the return rate of voluntary trip reports, which provide estimates of Chinook encounter rates by size class (legal or sublegal) and mark status (ad-marked or unmarked). An additional WDFW technician was hired to work exclusively on distributing and collecting VTRs from the angling public in Area 6. This technician, along with the dockside samplers, also educated anglers about the VTR program and salmon species identification in a focused effort to increase the sample size of VTR-based encounter data.

Unlike the other survey designs, Baseline Sampling does not provide a means for generating inseason or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook encounters and mortalities by size and mark-status using the methods provided in WDFW \& NWIFC (2013b). Thus, while these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 2.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 6 summer Chinook MSF from July 1 through August 15, 2013, including relative catch and effort patterns over the season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 2.1 Sampling/estimation details on target parameters associated with the overall Area 6 summer markselective fishery monitoring program.

| Activity | Focal <br> Parameter(s) | Secondary Parameter(s) | Sample Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Angler Interviews (Baseline Sampling) | Observed (insample) fishing effort (boat \& angler trips); kept and released fish. | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | Week | Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery). |
| Voluntary <br> Trip Reports (VTRs) | Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | When CRC-based retained Chinook estimates become available VTR data will be used in the estimation of total Chinook encounters by size/mark group $(\mathrm{LM}=48 \%, \mathrm{LU}=15 \%, \mathrm{SM}=$ $23 \%, \mathrm{SU}=14 \%$; Table 2.5), along with associated impacts, using the methods described in WDFW \& NWIFC (2013b). |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

[^3]Table 2.2 Observations of fishing effort, salmon harvest, and reported salmon releases, by week, for the Area 6 Chinook MSF from July 1 - August 15, 2013.

## 3) Marine Area 9 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a seventh consecutive summer Chinook MSF in Marine Area 9 from July 16 through August 4, 2013. Originally scheduled to close on August 31, 2013, the fishery was closed early based on a joint decision between WDFW and the tribes, due to in-season total Chinook encounters estimates exceeding preseason modeled expectations. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 9 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included intensive dockside creel sampling, on-the-water effort surveys, test fishing and collection of voluntary trip reports (VTRs) from the angling public. Table 3.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 9 summer Chinook MSF from July 16 through August 4, 2013.

Table 3.1 Sampling/estimation details on target parameters associated with the overall Area 9 summer markselective fishery monitoring program.

| Activity | Focal <br> Parameter(s) | Secondary Parameter(s) | Sample Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Creel Sampling | Fishing effort (boat \& angler trips); kept and released fish | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | One week | Within weeks, estimates were produced by daytype strata (weekday/weekend). Each week we sampled every Friday, Saturday and Sunday, and we randomly selected $n=2$ out of $N=4$ weekdays (Monday-Thursday) for sampling. |
| $\begin{aligned} & \text { On-the- } \\ & \text { water } \\ & \text { Surveys } \end{aligned}$ | Proportion of total angler effort that uses sample-frame sites (i.e., site "size measures") versus out-of-frame sites. | Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area. | $\begin{aligned} & \text { Boats } \\ & \text { and } \\ & \text { anglers } \end{aligned}$ | Month | A total of 3 boat surveys ( 1 weekday and 2 weekend) were conducted during the 20 day fishery. |
| Test Fishing | Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook | Chinook length, age, and DNA-based ${ }^{2}$ stock composition; species composition of non-Chinook encounters | Fish encounter | Season | Given sufficient sample size ( $\mathrm{n}=44$ ) of fish caught in the test fishery, we used the test fishery data only to estimate the size/markstatus proportions ( $\mathrm{LM}=61 \%, \mathrm{LU}=14 \%, \mathrm{SM}$ $=20 \%$, $\mathrm{SU}=5 \%$; Table 3.5) needed to produce encounter and mortality estimates. |
| Voluntary <br> Trip <br> Reports <br> (VTRs) | Size (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | The size/mark-status proportions of VTR data $(\mathrm{LM}=61 \%, \mathrm{LU}=9 \%, \mathrm{SM}=23 \%, \mathrm{SU}=7 \%$; Table 3.6) were very similar to those of the test fishery data. However, VTR data were not used in impact estimation due to the assumed higher data quality and sufficient sample sizes of the test fishery data. |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Estimated on a monthly time step but considered at the season-total level. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.
${ }^{2}$ Though samples were collected, DNA-based estimates of stock composition are not yet available for this fishery.

Table 3.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 9 Chinook MSF from July 16 - August 4, 2013. Values may not add exactly due to rounding error. AD = marked (adiposeclipped), $\mathrm{UM}=$ unmarked.

| Private Boat VTR | 17 1-trip VTRs, 44 Angler Trips | 23 | 4 | 10 | 3 | 40 | 0.83 | 0.85 |
| Pooled VTR | 19 Days, 54 Angler Trips | 27 | 4 | 10 | 3 | 44 | 0.84 | 0.87 |
| Size/mark-status composition: <br> Variance: |  | $\begin{gathered} \hline 0.61 \\ (0.00551) \\ \hline \end{gathered}$ | $\begin{gathered} \hline 0.09 \\ (0.00192) \\ \hline \end{gathered}$ | $\begin{gathered} 0.23 \\ (0.00408) \end{gathered}$ | $\begin{gathered} \hline 0.07 \\ (0.00148) \end{gathered}$ |  |  |  |

Size and mark-status proportions were very similar between private boat VTR and test fishery data $\left(\chi^{2}=0.78, d f=3, p-v a l u e=0.853\right)$. However, based on sufficient sample size and assumed higher data quality, we used only test fishery data to estimate the size/mark-status proportions needed to produce Chinook encounter and mortality estimates for the Area 9 summer Chinook MSF.

Table 3.7 Summary of season-wide fishery impact estimates for the Area 9 Chinook MSF from July 16 - August 4, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

## 4) Marine Area 10 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a seventh consecutive summer Chinook MSF in Marine Area 10 from July 16 through August 18, 2013. Originally scheduled to close on August 31, 2012, the fishery was closed early based on a joint decision between WDFW and the tribes, due to in-season total Chinook encounters estimates exceeding preseason modeled expectations. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 10 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included intensive dockside creel sampling, on-the-water effort surveys, test fishing and collection of voluntary trip reports (VTRs) from the angling public. Table 4.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 10 summer Chinook MSF from July 16 through August 18, 2013.

Table 4.1 Sampling/estimation details on target parameters associated with the overall Area 10 summer markselective fishery monitoring program.

| Activity | Focal Parameter(s) | Secondary Parameter(s) | Sample <br> Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Creel Sampling | Fishing effort (boat \& angler trips); kept and released fish | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release. | One week | Within weeks, estimates were produced by day-type strata (weekday/weekend). Each week we sampled every Friday, Saturday and Sunday, and we randomly selected $n=2$ out of $N=4$ weekdays (MondayThursday) for sampling. |
|  | Proportion of total angler effort that uses sample-frame sites (i.e., site "size measures") versus out-of-frame sites. | Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area. | Boats and anglers | Month | A total of 6 boat surveys ( 2 weekday and 4 weekend) were conducted during the 1 month fishery. |
| Test Fishing | Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook | Chinook length, age, and DNA-based ${ }^{2}$ stock composition; species composition of nonChinook encounters | Fish encounter | Season | Given sufficient sample size ( $\mathrm{n}=80$ ) of fish caught in the test fishery, we used the test fishery data only to estimate the size/mark-status proportions (LM $=49 \%$, $\mathrm{LU}=4 \%$, SM $=28 \%, \mathrm{SU}=20 \%$; Table 4.5) needed to produce encounter and mortality estimates. |
| Voluntary Trip Reports (VTRs) | Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook | Encounter data for nonChinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | The size/mark-status proportions of VTR data (LM $=61 \%$, LU $=7 \%$, SM $=21 \%$, SU = $11 \%$; Table 3.6) were similar to those of the test fishery data. However, VTR data were not used in impact estimation due to the assumed higher data quality and sufficient sample sizes of the test fishery data. |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Estimated on a monthly time step but considered at the season-total level. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

${ }^{T}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.
${ }^{2}$ Though samples were collected, DNA-based estimates of stock composition are not yet available for this fishery.

Table 4.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 10 Chinook MSF from July 16 - August 18,2013 . Values may not add exactly due to rounding error. AD = marked (adiposeclipped), $\mathrm{UM}=$ unmarked.

| $0.76(0.0023)$ |  |  |  |  |  |  |  |

Figure 4.5 Length-frequency distributions of marked (left panel) and unmarked (right panel) Chinook encountered by test fishers during the Area 10 Chinook MSF from July 16 - August 18, 2013. The vertical dashed line in the left panel corresponds to the legal size limit ( 22 in or 56 cm ).

Table 4.6 Total Chinook encountered (retained and released) by private-boat and charter boat anglers logging their trips on voluntary trip reports (VTRs) compared to test fishing encounter data, with estimates of legal-size and overall (legal and sublegal) mark rates during the Area 10 Chinook MSF from July 16 - August 18, 2013. AD = marked (adipose-clipped), UM = unmarked. Variances associated with size/mark-status proportions and mark rates are provided in parentheses.

|  | Effort and |  |  |  | gal | tals | Mark | Rate |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Sample Size | AD | UM | AD | UM | tais | Overall | Legal |
| Charter VTR | 13 1-trip VTRs, 58 Angler Trips | 19 | 1 | 2 | 2 | 24 | 0.88 | 0.95 |
| Private VTR | 70 1-trip VTRs, 132 Angler Trips | 56 | 7 | 24 | 12 | 99 | 0.81 | 0.89 |
| Pooled VTR | 78 Days, 184 <br> Angler Trips | 75 | 8 | 26 | 14 | 123 | 0.82 | 0.90 |
| Size/mark-status composition: <br> Variance: |  | $\begin{gathered} 0.61 \\ (0.00195) \end{gathered}$ | $\begin{gathered} 0.07 \\ (0.00050) \end{gathered}$ | $\begin{gathered} 0.21 \\ (0.00137) \end{gathered}$ | $\begin{gathered} 0.11 \\ (0.00083) \end{gathered}$ |  |  |  |

Size and mark-status proportions were similar between private boat VTR and test fishery data ( $\chi^{2}=3.57, \mathrm{df}=3$, p -value $=0.311$ ). However, based on sufficient sample size and assumed higher data quality, we used only test fishery data to estimate the size/mark-status proportions needed to produce Chinook encounter and mortality estimates for the Area 10 summer Chinook MSF.

Table 4.7 Summary of season-wide fishery impact estimates for the Area 10 Chinook MSF from July 16 - August 18, 2013. Release mortality rate $=0.15$ for legal fish and 0.20 for sublegal fish. Values may not add up perfectly due to rounding error. $\mathrm{AD}=$ marked (adipose-clipped), $\mathrm{UM}=$ unmarked.

## 5) Marine Area 11 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a seventh consecutive summer Chinook MSF in Marine Area 11 from June 1 through September 30, 2013. WDFW's Puget Sound Sampling Unit (PSSU) implemented an intensive monitoring program in Area 11 throughout the season in order to collect the data needed to estimate key parameters characterizing the fishery and its impacts on unmarked salmon. Sampling activities included dockside creel sampling and collection of voluntary trip reports (VTRs) from the angling public. Table 5.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 11 summer Chinook MSF.

Table 5.1 Sampling/estimation details on target parameters associated with the overall Area 11 winter markselective fishery monitoring program.

| Activity | Focal <br> Parameter(s) | Secondary <br> Parameter(s) | Sample <br> Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Creel Sampling | Fishing effort (boat \& angler trips); kept and released fish | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | Two weeks | Creel estimates were produced for twoweek estimation periods and stratified into "weekday" (Mon.-Thurs.) and "weekend" (Fri.-Sun.) day-type strata within weeks. For the weekday stratum, we sampled $n=2$ days out of $N=8$ available weekdays per two-week period. For the weekend stratum, we sampled $n=2$ days out of $N=3$ available weekend days per week. |
|  | Proportion of total angler effort that uses sample-frame sites (i.e., site "size measures") versus out-of-frame sites. | Total on-water boat and angler counts at assumed peak effort time interval (instantaneous count); spatial distribution of recreational fishing boats in the area. | Boats and anglers | Month | A total of 8 boat surveys ( 8 weekend) were conducted during the four month fishery. |
| $\begin{array}{\|l} \hline \text { Voluntary } \\ \text { Trip Reports } \\ \text { (VTRs) } \end{array}$ | Size <br> (legal/sublegal) and mark-status (marked/unmarked) composition of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | We used VTR data to estimate the size/mark-status proportions ( $\mathrm{LM}=52 \%$, $\mathrm{LU}=20 \%, \mathrm{SM}=19 \%$, $\mathrm{SU}=10 \%$; <br> Table 5.5) needed to produce encounter and mortality estimates. |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Estimated on a monthly time step but considered at the season-total level. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

Table 5.2 Estimates of total fishing effort and total salmon catch (harvest and releases) during the Area 11 Chinook MSF from June 1 - September 30, 2013. Values may not add exactly due to rounding error. AD = marked (adiposeclipped), $\mathrm{UM}=$ unmarked.

## 6) Marine Area 12 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a second consecutive summer Chinook MSF in Marine Area 12 from July 1 through September 30, 2013. WDFW's Puget Sound Sampling Unit (PSSU) implemented a "Baseline Sampling" program (see WDFW 2012a for details) consisting of dockside angler interviews with catch sampling along with efforts to distribute and collect voluntary trip reports (VTRs) from the angling public.

Unlike the other survey designs, Baseline Sampling does not provide a means for generating inseason or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook encounters and mortalities by size and mark-status using the methods provided in WDFW \& NWIFC (2013b). Thus, while these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 6.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 12 summer Chinook MSF from July 1 through September 30, 2013, including relative catch and effort patterns over the three-month season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 6.1 Sampling/estimation details on target parameters associated with the overall Area 12 mark-selective fishery monitoring program.

| Activity | Focal Parameter(s) | Secondary Parameter(s) | Sample Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Angler Interviews (Baseline Sampling) | Observed (insample) fishing effort (boat \& angler trips); kept and released fish. | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | Week | Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery). |
| Voluntary Trip Reports (VTRs) | Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | No VTRs were returned for the Area 12 summer Chinook MSF. When CRC-based retained Chinook estimates become available, estimates of total Chinook encounters by size/mark group, along with associated impacts, will be estimated using the M1 approach, as outlined in WDFW \& NWIFC (2013b). |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

[^7]Table 6.2 Observations of fishing effort, salmon harvest, and reported salmon releases, by week, for the Area 12 Chinook MSF from July 1 - September 30, 2013. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark status.

## 7) Marine Area 13 Summer Mark-Selective Chinook Fishery

The Washington Department of Fish and Wildlife (WDFW) implemented a seventh consecutive summer Chinook MSF in Marine Area 13 from May 1 through September 30, 2013. WDFW's Puget Sound Sampling Unit (PSSU) implemented a "Baseline Sampling" program (see WDFW 2012a for details) consisting of dockside angler interviews with catch sampling along with efforts to distribute and collect voluntary trip reports (VTRs) from the angling public.

Unlike the other survey designs, Baseline Sampling does not provide a means for generating inseason or immediate post-season estimates of fishery total catch and effort. These estimates will be available approximately one year after the close of the fishery through the WDFW Catch Record Card (CRC) program. Once available, CRC-based catch estimates will be used to generate estimates of total Chinook encounters and mortalities by size and mark-status using the methods provided in WDFW \& NWIFC (2013b). Thus, while these descriptors of MSF impacts are not presented in the present document, they will be available at a future time.

Table 7.1 summarizes the parameters estimated and the sampling activities associated with each parameter. Specific procedures used for collecting these data and estimating critical data parameters are presented in detail in our separate Methods Report (WDFW 2012a). In this section we present results from our monitoring activities during the Area 13 summer Chinook MSF from May 1 through September 30, 2013, including relative catch and effort patterns over the three-month season based on the assumption that baseline-sampling observations of these parameters are good indicators of associated fishery-wide trends.

Table 7.1 Sampling/estimation details on target parameters associated with the overall Area 13 mark-selective fishery monitoring program.

| Activity | Focal Parameter(s) | Secondary Parameter(s) | Sample Unit(s) | Finest Estimation Time Step | Comments |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Dockside Angler Interviews (Baseline Sampling) | Observed (insample) fishing effort (boat \& angler trips); kept and released fish. | Catch rates (CPUE); length, age, and CWT composition of harvest ${ }^{1}$; collection of angler fishing methods. | Angler trip; kept fish; reported fish release | Week | Observed catch per angler trip and species composition data obtained from baseline sampling will ultimately be combined with Catch Record Card (CRC) data to produce fishery-total estimates at a later time (approximately one year following the fishery). |
| Voluntary Trip Reports (VTRs) | Size (legal/sublegal) and mark-status composition (marked, unmarked) of encountered Chinook | Encounter data for non-Chinook species (e.g., coho) that the angler may record on the VTR form | Fish encounter | Season | When CRC-based retained Chinook estimates become available VTR data may be used in the estimation of total Chinook encounters by size/mark group $(\mathrm{LM}=80 \%, \mathrm{LU}=17 \%, \mathrm{SM}=$ $3 \%$, SU $=0 \%$; Table 7.5), along with associated impacts, using the methods described in WDFW \& NWIFC (2013b). |
| Overall <br> Fishery <br> Impacts <br> Estimation | Total Chinook encounters and mortalities, by size/mark-status group | Ratios of encounters and mortalities per kept Chinook | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. |
| Coded-wire tag (CWT) Impacts Estimation | Marked/unmarked double-index tag (DIT) encounters and mortalities | N/A | N/A | Season | Will be estimated at a later date using the CRC-based retained Chinook estimate, when it becomes available. The temporal resolution of DIT impacts is constrained by the total number of tags recovered. |

[^8]Table 7.2 Observations of fishing effort, salmon harvest, and reported salmon releases, by week, for the Area 13 Chinook MSF from May 1 - September 30, 2013. Note: displayed values are sample observations (summed across sampled sites) and not fishery-total estimates. AD = marked (adipose-clipped), UM = unmarked, UK = unknown mark status.

## ACKNOWLEDGEMENTS

This review of the 2013 summer Chinook MSFs in Areas 5, 6, 9, 10, 11, 12 and 13 is the result of the dedicated efforts of several individuals. First, we thank the WDFW Puget Sound Sampling Unit (PSSU) field supervisors and their staff, who successfully implemented comprehensive sampling programs during the summer 2013 Chinook MSFs. The PSSU field staff have conducted the dockside creel surveys, test fishery sampling, on-the-water effort surveys, aerial surveys, voluntary trip report program, angler education, as well as compiled, error-checked, and delivered high-quality monitoring data to enable mark-selective fishery evaluations. In particular, from Central Sound, we thank Slim Simpson (Central Sound Sampling Supervisor), Jeff McKee, Kathy Young-Berg, Sue Kraemer, Pete Sergeeff, Courtney Adkins, April Bosley, Martha Dunham, Geoff Lowery, Eric Lambert, Kendra Baird, Joel Teitge , Area 10 test fishers Joe Short and Ben Nelson, and Area 9 test fishers Christopher Frazier and Toby Black. From the Strait of Juan de Fuca/Peninsula area, we thank Larry Bennett (Peninsula Sampling Supervisor), Connie Warren, Jessica Newberg, Ryan Ollerman, Raese Reeves, Joseph Enyeart, Joseph Boucher, Loren Baker, Eli Owens, Lorena McGovern, and Alan Brown. From North Sound, we thank Steve Axtell (North Sampling Supervisor) and Marcus Thompson, Jim Repoz and Dean Toba. From South Sound as well as Hood Canal and the Kitsap Peninsula, we thank Dan O’Brien (South Sound Supervisor), Justin Terry, John Moore, Scott Walker, Cara Crowley, Mary Raymond, Bryan Blazer, Jesse Jones, Katrina Outland, Robert Green, Shannon Hagen, Tom Matthews, Paul Lorenz, Kristina Bonsell, Karen Shields, John Rohr and Maria Garcia-Rojas.

At the WDFW Headquarters in Olympia, we thank both Lance Campbell and John Sneva for their scale-reading expertise. We also thank Gil Lensegrav and the CWT Lab staff for their help and expertise in providing decoded CWT data. Also at the Olympia Headquarters office, Lee Dyer and Erin Dilworth provided substantial help with personnel logistics and support services for the summer 2013 Chinook MSF sampling projects. Mark Baltzell and Karen Kloempken supervised the sampling unit activities, provided timely in-season creel estimates, scheduled all boat surveys and worked with the WDFW Selective Fisheries Biologist, Jon Carey, to produce post-season analyses and reports. Also, Karen Kloempken managed the WDFW sampling databases and provided finalized post-season data. Are Strom completed "R" programming updates and database development to enable efficient analyses of selective fishery data and produce tables and figures for our post-season selective fishery reports.

Finally, we extend a special thanks to Robert Conrad of Northwest Indian Fisheries Commission (NWIFC) for his dedicated efforts and expertise in working with us to develop and refine markselective fishery estimation methods and reports. We also thank NWIFC biometrician Marianna Alexandersdottir for her helpful reviews and valuable guidance regarding sampling design and estimation methods, reporting efficiencies, and new opportunities to plan a collaborative online database that will better enable information sharing. Additionally, we thank tribal technical representatives, particularly Kit Rawson (Tulalip Tribe) and Bob Hayman (Skagit River System Cooperative), for their helpful contributions during our state-tribal collaborative efforts to develop the new, more efficient annual reporting format for selective fisheries.

Appendix B. 7 Coded-wire tag (CWT) recoveries in the summer Area 13 Chinook MSF from May 1 - September 30, 2013.

| Area | Recovery Date | Tag Code | Brood Year | Release Site |  | Rearing Hatchery | Release <br> Agency | DIT Codes | $\begin{gathered} \text { FL } \\ (\mathrm{cm}) \end{gathered}$ | Label | Recovery Mark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 13 | 5/19/2013 | 635587 | 2010 | MINTER CR | 15.0048 | MINTER CR H | WDFW |  | 64 | 62794 | AD |
| 13 | 8/13/2013 | 635587 | 2010 | MINTER CR | 15.0048 | MINTER CR H | WDFW |  | 63 | 26136 | AD |
| 13 | 8/27/2013 | 210905 | 2009 | CLEAR CR | 11.0013 C | CLEAR CREEK H | NISQ | 635096 | 75 | 26137 | AD |
| 13 | 9/3/2013 | 210957 | 2010 | CLEAR CR | 11.0013 C | CLEAR CREEK H | NISQ | 635692 | 68 | 56596 | AD |

[^0]:    ${ }^{1}$ The regulations specific to winter mark-selective fisheries in Puget Sound Marine Catch Areas allowed for the retention of up to two legal-sized ( $\geq 22$ inches [ 56 cm ]) marked Chinook salmon per day and required the immediate release of all unmarked or sublegal Chinook. Additionally, anglers were: $i$ ) required to use single-point, barbless hooks while fishing for salmon, $i i$ ) held to a combined (all salmon species) two-fish daily limit, and iii) held to a handling rule that prevented them from bringing unmarked and/or sublegal Chinook aboard their vessels.
    ${ }^{2}$ For information regarding effort, harvest and impacts estimates related to these fisheries, see the references listed at the end of this report, or visit: http://wdfw.wa.gov/publications/search.php?Cat=Fishing / Shellfishing\&SubCat=Selective Fishing.

[^1]:    ${ }^{3}$ Though the necessary tissue samples have been collected, DNA-based estimates of stock composition are presently unavailable for Puget Sound/Strait of Juan de Fuca mark-selective fisheries. In the present report, methods for producing CWT-based (unexpanded) estimates of the stock composition of marked Chinook harvest are provided.

[^2]:    ${ }^{1 /}$ Number of retained Chinook sampled includes all retained Chinook inspected for CWT's, from all sites sampled during the summer 2013 Area 5 Chinook MSF (creel estimates and fish sampled as part of baseline sampling).

[^3]:    ${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

[^4]:    ${ }^{1 /}$ Number of retained Chinook sampled includes all retained Chinook inspected for CWT's, from all sites sampled during the summer 2013 Area 9 Chinook MSF (creel estimates and the fish sampled as part of baseline sampling).

[^5]:    ${ }^{1 /}$ Number of retained Chinook sampled includes all retained Chinook inspected for CWT's, from all sites sampled during the summer 2013 Area 10 Chinook MSF (creel estimates and the fish sampled as part of baseline sampling).

[^6]:    ${ }^{1 /}$ Number of retained Chinook sampled includes all retained Chinook inspected for CWT's, from all sites sampled during the summer 2013 Area 11 Chinook MSF (creel estimates and the fish sampled as part of baseline sampling).

[^7]:    ${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.

[^8]:    ${ }^{1}$ The length and CWT composition of landed catch was assessed on a season-wide basis for impact estimation.
