

Rivers/Streams - Special Rules

The following two sections include rules for the rivers, streams, and beaver ponds that are open for fishing across the state. Beaver ponds within specified stream systems follow the same rules as the streams unless otherwise noted. All unlisted rivers, streams, and beaver ponds are closed.

These waters are presented alphabetically in two sections, as shown on the map below:

- **Puget Sound and Coastal rivers, pages 18-46.**
- **Columbia River Basin, including the Snake River, pages 48-73.**

Various fish populations are listed as threatened or endangered under the U.S. Endangered Species Act, so these regulations are designed to protect listed species through all stages of their lives.

WDFW frequently issues emergency rules during the season when fish managers determine immediate action is needed to protect fish stocks or adapt to changing conditions, such as reduced stream flows or high water temperatures.

Anglers should regularly check for emergency rule changes by calling the fishing hotline at 360-902-2500 or by visiting the WDFW website at http://wdfw.wa.gov/about/regulations/emergency_rules.html. For other questions, call the Fish Program customer service desk at 360-902-2700.

Trout Identification

Steelhead

Steelhead are ocean-run rainbow trout that run in both summer and winter seasons, returning after one to three years at sea.

Bull Trout

These fish are olive green to brown above and on the sides with no wormlike markings. There are cream or pink spots. The tail is slightly forked. Dolly Varden are typically smaller and are only found in a few headwater streams in Western Washington. Bull trout have a longer jaw and are found in Eastern and Western Washington and may also be encountered in marine waters.

Dolly Varden

Eastern Brook Trout

Dark green or blue with white belly which may become a vibrant orange as the fish nears spawning. Its upper body and dorsal fin have wormlike markings. Its sides have yellow and pink spots with blue rings. The lower fins are white-tipped and the tail is square.

Rainbow Trout

Body color is variable and may be silvery in lakes and reservoirs. Numerous closely grouped spots on dorsal fin and tail. The maxillary (upper jaw bone) does not usually extend beyond the back of the eye.

Brown Trout

This trout's back is brown or olive with large spots. Sides are light brown to yellowish with large dark spots surrounded by halos of blue-gray. The tail has few spots.

Westslope Cutthroat Trout

Body color is variable. Numerous closely grouped spots towards the dorsal fin and tail. The maxillary (upper jaw bone) usually extends beyond the back of the eye. Red or orange slash on the underside of the jaw.

Warmwater Species Identification

Largemouth Bass

This bass is dark green on the back and sides, with a dark, horizontal band along its sides. The belly is white. The large jaw, when closed, extends behind the eye.

Smallmouth Bass

This bass is dark olive to brown on the back with a white belly. The sides are bronze and have dark vertical bands. The small jaw does not extend behind the eyes.

Bluegill

The bluegill is olive green to bluish with a blue and orange lower body. It has vertical bars on each side and solid black gill opercular lobes.

Yellow Perch

This perch has a greenish to yellow body, a white belly, and vertical dark crossbars on each side. There are no prominent teeth.

Bullhead

The body is darkish-black to brown. Its head is not as flat as a channel catfish. The cat-like barbels on its mouth are brown or yellow. The skin has no scales. There are no spots on the side, and the tail is not forked.

Channel Catfish

The body goes from blackish to silvery to white on the sides. There may be some small irregular spots on the sides. Its skin lacks scales. It has cat-like black barbels on the mouth and jaw, a flat head, and forked tail.

Crappie

The body is silvery with dark spots. The fins have dark bands. White crappie may have vertical bars on the sides.

Walleye

Coloration is black to brown on a whitish background. The lower portion of the tail fin is also whitish. It has a dark spot on the first dorsal fin, but no strong cross bars on the sides. The teeth are elongated.
