This program receives Federal assistance from the U.S. Fish and Wildlife Service. Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972, the U.S. Department of the Interior and its bureaus prohibit discrimination on the bases of race, color, national origin, age, disability and sex (in educational programs). If you believe that you have been discriminated against in any program, activity or facility, please contact the WDFW, ADA Coordinator at 600 Capitol Way North, Olympia WA 98501 or write to:

U.S. Fish and Wildlife Service, Civil Rights Coordinator for Public Access 4401 N. Fairfax Drive, Mail Stop: WSFR-4020, Arlington, VA 22203

PREFACE

The Hatchery Escapement Report is published annually by the **Washington Department of Fish and Wildlife** (**WDFW**) **Fish Program/Science Division** and is generated directly from the WDFW Adult Report Database. The database contains daily records of adult fish handling activities as reported by hatchery facilities on the Adult Report form. It describes the total escapement, or return of species of salmon and trout, to **WDFW** facilities and cooperative projects within Washington State. It also enumerates the total number of fish returning to hatchery racks or traps in the rivers and streams of Washington State for the spawning activity cycle beginning in approximately March 2017 and ending in approximately March 2018.

For this report, escapement is defined as the return of spawning fish to hatchery racks or traps. The data for this report are collected from WDFW hatchery staff that enumerates runs of fish returning to their respective streams; these numbers are recorded on adult records, which are sent to Olympia for compilation and analysis. These records provide information on run timing, information on the results of selective fisheries, and critical data for coded-wire tag (CWT) analysis. CWT's are a management tool used to determine the status of runs and the effect of various management strategies and research projects.

Bull trout are a listed species. This report is not a comprehensive record of bull trout found in Washington State by WDFW staff.

The 2017-2018 return year produced 592,326 anadromous and 114,540 resident adult fish returning to hatchery racks and traps for a total adult escapement of 706,866. These returning adults produced an anadromous eggtake of 199,748,686 and a resident eggtake of 32,302,691 for a total eggtake of 232,051,377.

This annual hatchery escapement report is organized and divided into three geographical regions: Puget Sound (including the Straits of Juan de Fuca); Coast; and Columbia River. It is further divided by species and race, or run. For example, Chinook salmon are described in the three geographic regions as well as by their spring, summer, and fall races.

Definitions

Some **column heading definitions** and other definitions are provided to aid the understanding of this document.

- Facility name column: describes the location where fish were trapped. Because this report was generated directly from the Adult Report Database, many facility names are abbreviated to match the standard names used for data sharing through the Pacific Salmon Commission.
- **Stock** column: represents the assumed origin of the fish returning to that hatchery, river, or stream
- **Bo** (**brood origin**) column: represents the origin of the fish as to whether they are **hatchery origin** (**H**) stock, **wild origin** (**W**) stock, or **mixed origin** (**M**) stock of hatchery and wild fish.
- **Total trapped** column: represents the total number of fish trapped at the hatchery rack. The total trapped may not represent the total run to any given river due to the presence of

either wild, hatchery, or mixed stocks that may spawn below the hatchery rack; may die, or be harvested below the hatchery via sport, commercial, or tribal fisheries. This column also does not include fish that pass the trap/rack when it is not in use such as a temporary weir or a fish collection facility that is only used intermittently. Total trapped **adults** column enumerates full-sized sexually mature fish returning to spawn in their home streams or rivers. Total trapped **jacks** column: enumerates sexually mature male fish that return at a very small size to their home streams or rivers. Coho and chinook salmon produce the largest numbers of jacks.

- Eggtake column: records the estimated eggs taken via spawning activities. Eggtake goals were taken from the Future Brood Document and represent pre-season eggtake goals. The goals may have changed in-season due to unforeseen factors, meaning that actual eggtake may have differed from the listed goals. NA for eggtake goal means there was no eggtake goal.
- **Released to stream** column: records the numbers of fish returned to the stream above or below the hatchery rack or trap that were not spawned.
- **Trapped less released** column: equals the number of fish that were spawned, died, transferred out, or distributed minus the fish that passed upstream.

Race is defined as broad groupings of hatchery stock fish species representing distinct adult timing or juvenile migration patterns. Wild stock timings may differ according to the location and the stock of fish. NA for race refers means that we do not identify a timing difference. For example, most Puget Sound region coho and chum salmon stocks are referred to as NA. Type N refers to Columbia River region juvenile coho that turn north (N) as they leave the Columbia River and return later than normal as adult fish. Type S refers to Columbia River juvenile coho that turn south (S) as they leave the Columbia River and return earlier than normal as adult fish. Anadromous Coastal refers to cutthroat that spend a portion of life in saltwater, where **Resident Coastal** Cutthroat are entirely freshwater. **Westslope** generally refers to resident cutthroat originating from the drainages of the westslope of the Rocky Mountains. Westslope is to refer to resident cutthroat from the Yakima River upstream in the Columbia drainage. Lahontan refers to a sub-species of resident cutthroat found only at Lake Lenore in Washington State. Redband refers to a sub-species of rainbow trout found only at Phalon Lake in Washington State. Spring refers to adults that return to their home streams in the spring months of the year and spawn primarily in the late summer to early fall months of the year. **Summer** refers to adults that return from July to September and spawn from December to January. Fall refers to adults that return to spawn primarily in the fall months of the year, although this timing varies between chinook and chum salmon. Winter refers to adults that return from mid-November to the end of January and spawn from December to January. Winter-Late refers to a specific stock of Cowlitz River wild winter steelhead with a later than normal timing that is being restored.

In particular, we thank the following staff for their assistance with this report: Jennifer Kordosky
